

Instruction on how to use the solution.

Please find attached zip file. Download it and extract on your local machine. You can open the folder using any tool (Visual Studio Code). In that folder there will be two folder one is for front-end and other one is for back-end.

*Open terminal on your VS code and change directory to \SirajAhmed\back-end> using "cd" command.

-type the command "npm install" and run, then type the command "npm start" and run.

*Then another new terminal change directory to \SirajAhmed\front-end\app> using "cd" command.

-type the command "npm install" and run, then type the command "npm start" and run.

*Now the application will start working first create devices and then locations.

*Make sure you have installed MongoDB locally.

Thank you for your time and consideration.
